

AS2000

High Volume Sealer

With the introduction of the AS2000, we have widened our already extensive range of pressure seal equipment. Both systems are designed for the production environment and are capable of processing large volumes of pressure seal forms utilising all fold types.

Both systems feature:

- *Double Document Detection*
- *Single form hand feed station*
- *Integral Base Unit*
- *Ease of operation*
- *Self calibration for various paper weights*

The AS2000 has a processing speed of up to 20,000 forms per hour and features a vacuum feed system. This can be upgraded to feature a high capacity feeder which will speed up production output and can hold up to 4,500 forms.

The system is modular and uses a highly effective 4 roller sealing system. It also features a double document detection capability and a single form hand feed station.

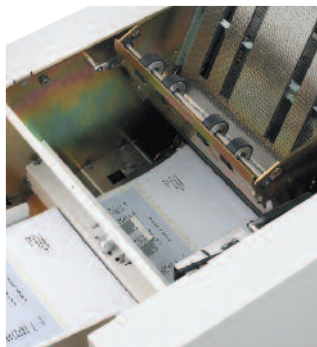

Vertical Stacker

The unit holds up to 500 Z fold forms and 750 V fold forms. It delivers the form upright to aid speedy processing and features a 'stack full' sensor.

Divert and Hand Feed

Any double fed documents are ejected into the divert area and can be simply processed through the hand feed station.

Easy Access

The AS2000 system provides unsurpassed access to the paper path so a machine stoppage can be dealt with quickly and easily. This ensures maximum uptime when keeping to that all important deadline.

Vacuum System

Holding 400 sheets which are bottom fed, the unit is highly adjustable. Features also include adjustable air flow and vacuum, ensuring a high level of control. An optional high capacity feeder is available which can hold up to 4,500 forms.

Operator Display

The large LCD display guides you through operating the machine quickly and simply. It features, not only hourly and total count, but also an In-Out job count to ensure form integrity.

Specification

Form Sizes:	Depths: 7" (178mm) - 16" (406mm) Widths: 4" (101mm) - 9 1/2" (241mm)
Paper Weights:	80gsm to 145gsm
Form Folds:	All forms including 'Z', 'C' and 'V'
Machine size	620mm (w) x 4150mm (l) x 1165mm (h) Including hi-cap and extended conveyor
Weight	290Kg approx. (Excluding hi-cap)
Speed:	Up to 20,000 per hour
Volume:	650,000 per month
