

AS350

Desktop Sealer

The AS350 is part of a complete range of pressure seal solutions from DMS, including forms design, supply and sealing systems.

With its instant security and readiness for the postbag, Pressure Seal is the perfect solution for single-page applications such as Payslips and P60's, PIN Mailers, Cheques, Test Results and many more.....

Designed to suit all of these applications and integrate with your laser printer, the AS350 is the ideal solution to the needs of many organisations.

Flexibility

The AS350 is designed to meet your requirements, offering the ability to fold and seal most formats of document, whether they be Z, C or V-Fold, in sizes up to 14". By linking the sealer on-line with a laser printer, not only is the job done in a single step, but security and integrity are increased as the document is not handled between printing and sealing.

Stand alone

The AS350 can also be fed from a stack of pre-printed forms. This feature can either be used as a complete stand-alone system, or as part of an on-line system to feed documents printed on another printer.

Support

Along with the supply of the system, DMS are able to ensure the reliability of your system through installation and training followed by on-site support from our team of technicians.

Features

- Double Document Detection
- CE approved
- Optional Printer Interface
- Extremely easy to operate

Specification

Form Sizes: Depths - 11" (279mm) A4(297mm)
14" (356mm)
Widths - Up to 8½" (216mm)

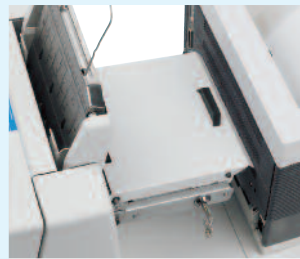

Paper Weights: 80gsm to 105gsm

Form Folds: 'Z', 'C' or 'V'

Machine Size: Width - 410mm
Length - 320mm (stand-alone)
555mm (with interface)
Height - 385mm (without tray)
530mm (with tray)

Weight: 38kg

Speed: 3,400 forms an hour (stand-alone)

Printer Interface

Designed with a lockable cover to give the user a secure and single-step process, the optional interface links the AS350 to a wide range of laser printers.

If your printer is capable of redirecting the document it will not need to be dedicated and can still be used for general office printing duties.

Easy to use

Operating the AS350 could not be easier!

Once the fold plates have been set to suit your documents, you simply press Green for go, or Red to stop.

When running on-line with a printer, the system will wait in stand-by mode and automatically start when the first printed document arrives.

A digital counter keeps track of the number of documents processed at all times.

Access

In the event of a mis-feed, the entire front cover of the AS350 opens, giving clear, safe access to the entire paper path through the system.

The printer interface will work with most desktop laser printers which present the document face-up, head-first from a rear exit.
